Product features:

Product short description:

Compact and lightweight, the Survival Double-Twisted Wire Saw is a simple, dependable cutting tool for outdoor use. Designed for campers, hikers and survival kit users, it fits easily into any backpack, pouch or emergency kit.

- **Material:** Twisted stainless-steel wires deliver efficient cutting on wood, plastic and thin metal while resisting corrosion.
- **Use:** Hand-operated wire saw for campsite tasks, trail work and emergency cutting.
- **Portability:** Small, lightweight and easy to stow in pockets, pouches or survival kits.
- **Reliability:** Durable, low-maintenance design for dependable field use.

Product description:

Product overview

The Seghetto Survival a Doppio Filo Ritorto is a stainless-steel double-twisted wire saw designed for outdoor and emergency use by campers, hunters, fishers, survival enthusiasts and tactical professionals. It is a compact cutting tool intended for small-diameter work in the field.

Definition: a portable double-twisted wire saw that cuts wood, plastic, rubber and soft metals. Total length 72 cm, ring diameter 3.4 cm, suitable for objects with diameter under 10 cm; rollable for easy storage and transport.

Main features

Reliable, compact and energy-efficient, this survival saw fits into tactical, military surplus and duty kits where lightweight cutting tools are needed.

- **Double-twisted wire design:** Cuts in both directions for steady progress and reduced effort.
- **Stainless steel construction:** Corrosion-resistant for outdoor use.
- **Multi-material cutting:** Effective on wood, plastic, rubber and soft metals.
- **Portable:** Ring terminals allow the saw to be rolled up and stored with minimal space.
- **Field-ready size:** 72 cm total length with 3.4 cm ring diameter for secure handling.

How to use / When it’s useful

Quick answer: use the ring terminals as handles and pull the saw back and forth, keeping steady tension to cut branches, rope, belts or small soft-metal items. In most cases, this tool is used for shelter building, trail maintenance, emergency extrication and other outdoor tasks.

Work at a controlled pace and use gloves for better grip and protection. The saw is most useful where a lightweight, compact cutting tool is preferred over a heavier folding saw or axe.

Care and notes

Regular cleaning and basic maintenance keep the saw reliable in the field. Follow these practical care tips:

- Clean off sap, dirt and metal filings after use to prevent corrosion.
- Keep the cutting edges free of heavy damage; replace if teeth are worn or broken.
- Store rolled up in a dry place; avoid prolonged exposure to moisture.
- Use appropriate personal protective equipment (gloves, eye protection) when cutting.

FAQ

Q: What materials can this saw cut?

A: The saw is designed for wood, plastic, rubber and soft metals. It is not intended for hard metals or large-diameter logs.

Q: What is the total length of the saw?

A: Total length is 72 cm, which provides reach for small branches and other common field tasks.

Q: Is the saw easy to carry?

A: Yes. The ring terminals allow the saw to be rolled up and stowed in a pack or kit, making it suitable for camping, hiking and tactical duty gear.

Q: How do I maintain the saw?

A: Clean residue after each use, check teeth for wear, and store dry. Replace the saw if teeth are damaged or performance drops significantly.

Q: Is this suitable for emergency situations?

A: Yes. Its compact size and bidirectional cutting action make it useful for quick cuts in emergencies, such as cutting ropes, straps or clearing small obstructions.

Q: What is the ring diameter and why does it matter?

A: The ring diameter is 3.4 cm; this provides a secure grip for manual pulling and works with common cordage or handles for controlled cutting action.

Tip: Choose the correct variant or size if multiple options are offered and consider adding compatible field tools to your cart (gloves, sheath, or storage pouch) to complete your tactical, survival or military surplus kit.
