Product features:

Product short description:

The VH DCA8 One For Two holster is a practical, dual-carrier solution for professionals who need to carry two items securely while maintaining quick access. It offers a clean, functional profile and durable construction for everyday use.

- **Material:** Made from high-quality, durable materials to resist wear and extend service life.
- **Capacity:** Holds two devices simultaneously with reliable retention and easy draw.
- **Design:** Streamlined, functional layout for quick access and discreet carry.
- **Use:** Ideal for professionals on the move who need organized, ready carry without sacrificing comfort.

Product description:

Product overview

VH DCA8 One For Two is a belt-mounted, injection-molded polymer holster designed for police, security, and tactical users who need high retention and fast, controlled access. Definition: a Level III retention holster with a dual locking system that secures the pistol at the hood and at the

trigger-guard area.

This holster balances secure carry for duty or tactical use with quick access when needed. It is covered by an international patent and is compatible with Vega Holster mounting systems; availability may be limited.

Main features

Key design highlights and user benefits:

- **Injection-molded polymer** construction for durable, consistent fit.
- **Level III retention** to reduce accidental or unauthorized draws.
- **Dual locking system** — rotating hood plus automatic trigger-guard lock on insertion.
- **Single internal release** button frees both locks for a single-hand draw.
- **Adjustable retention screw** to fine-tune friction to the user's preference.
- **Included fixed belt loop (art. 8 K 40)** positions the grip on the centerline of the belt and keeps the holster off the body.
- **Vega Holster compatible** — mounts on all Vega passants and kits.

How to use / When it's useful

Quick answer: press the internal release button to disengage both locks, then draw the pistol in a controlled motion. This holster is intended for belt carry during patrols, duty, or tactical operations where retention and fast access are required.

In most cases, mount the holster using the included fixed loop or compatible Vega Holster kit, then set the retention screw to your preferred friction. Train with your unloaded firearm to make sure your draw is smooth and safe.

Care and notes

Simple maintenance keeps the holster reliable and safe:

- Check and tighten the retention screw periodically to maintain consistent friction.
- Keep the holster clean and free of dirt, grit, or moisture that could affect lock operation.
- Confirm correct fit and secure mounting on your belt or Vega Holster kit before use.
- Do not alter or modify locking mechanisms; changes can affect retention and safety.

FAQ

Q: Which firearms fit the VH DCA8 One For Two?

A: The holster fits a wide range of pistols thanks to adjustable retention and its design. Verify fit for your specific model before duty use.

Q: How does the dual locking system work?

A: The system locks the pistol at the top with a rotating hood and at the trigger-guard with an automatic lock on insertion. Both locks release together via the internal button.

Q: Can I adjust how tightly the gun is held?

A: Yes. A retention screw lets you increase or decrease friction so you can set a draw tension that suits your training and duty requirements.

Q: Is the fixed belt loop included?

A: Yes. The fixed passante (art. 8 K 40) is included and keeps the holster a short distance from the body with the grip aligned to the belt centerline.

Q: Is this holster covered by a patent?

A: Yes. The VH DCA8 One For Two is covered by an international patent, reflecting its protected design and locking solution.

Q: Can I mount it on other equipment or kits?

A: It is designed to mount on all Vega Holster passants and kits. For non-Vega mounting, check compatibility with your specific belt system first.

Tip: Choose the correct variant and size for your pistol and check mounting compatibility with your belt or Vega Holster kit before purchase. Browse related duty and tactical holsters to compare retention levels and carry options.
