# Tactical Knee Pads X-Tacs - Green

**Product price:**

€22.00 tax included

**Product codes:**

Reference: Art. 2295
EAN13: 0658606572720
UPC: 658606572720

**Product features:**

**Product short description:**

The Ginocchiere Protettive Verdi X-Tak are lightweight protective knee pads for military training, airsoft and hunting.

- **Material:** X-shaped high-impact polymer shell, 400D nylon, 10 mm high-density foam and Coolmax® breathable lining.
- **Protection:** Shock-dissipating design that spreads impact from multiple angles to protect knees on rough ground.
- **Fit:** Two adjustable Velcro straps for a secure fit and quick removal; one size fits most; internal label for name and rank.
- **Use:** Designed for military training, airsoft, hunting and demanding outdoor activities.

**Product description:**

## Product overview

The X-Tak Green Protective Knee Pads are tactical knee pads designed for training and field use by military, police, security and outdoor enthusiasts. Definition: a slim, single-size knee protector

with a high-impact polymer X-shaped shell, 10 mm high-density foam and a breathable Coolmax® liner for long sessions.

Built for mobile duty and rough terrain, these knee pads balance impact absorption, stability and freedom of movement. They suit airsoft, hunting, outdoor work, training and general military surplus use where low-profile protection is needed.

**Main features**

Practical, durable components focused on comfort, adjustability and multi-angle protection.

- **X-shaped high-impact polymer shell:** spreads and reduces peak impact forces.
- **10 mm high-density foam:** cushions the kneecap and improves comfort during prolonged kneeling.
- **Breathable Coolmax®-type liner:** helps manage moisture and reduce skin irritation.
- **Double adjustable straps with Velcro:** quick to fit and secure, usable with gloves on.
- **Nylon 400D construction and 6 reinforced eyelets:** improved tear resistance in high-stress areas.
- **Slim, low-profile design:** fits under tactical and cargo pants without bulk.

**How to use / When it’s useful**

Quick answer: strap the top and bottom straps so the pad stays stable without cutting circulation; test by running briefly to check rotation. Use on abrasive surfaces, gravel, wet grass, urban concrete and rocky ground where kneeling or crawling is frequent.

In most cases, wear them over or under pants depending on pocket layout and layering. They are useful for training drills, dynamic shooting, patrols, hunting and any outdoor work that requires repeated kneeling or prolonged support.

**Care and notes**

Simple care keeps materials performing and extends product life. Inspect fasteners and seams regularly and follow these practical rules.

- Clean with a soft brush, wipe with a damp cloth and mild detergent; air dry away from direct heat.
- Store in a dry place away from prolonged UV exposure to avoid fabric degradation.
- Check straps, eyelets and Velcro often; replace if you find significant wear or damage.
- For certified personal protective equipment (PPE) use at work, verify compliance with required standards with your safety officer (e.g., EN 14404 where applicable).

## FAQ

**Q:** Are these knee pads suitable for rocky terrain?

**A:** Yes. The high-impact polymer shell and X-shaped design help absorb shocks and resist abrasion on rock and gravel.

**Q:** Can I wear them with slim tactical pants?

**A:** Yes. The low-profile, slim design is compatible with slim and cargo tactical trousers and fits under rain over-pants.

**Q:** How do I stop the pads from rotating?

**A:** Tighten the lower strap slightly more than the upper one and test with a short run. Adjust until the pad remains stable but not too tight.

**Q:** Will they overheat in summer?

**A:** The Coolmax®-type liner improves moisture wicking and breathability, reducing heat buildup compared with non-breathable liners. Take regular breaks and hydrate during long, hot sessions.

**Q:** How should I clean and maintain them?

**A:** Remove solid dirt with a soft brush, wipe with a damp cloth and mild detergent, then air dry. Do not use aggressive solvents or direct heat sources.

**Q:** Are these certified as workplace PPE?

**A:** These knee pads are designed for sport and training use. For workplace PPE use, confirm conformity to required standards (for example EN 14404) with your employer or safety officer before relying on them as certified protection.

**Tip:** Choose the fit that works with the clothing you'll wear during operations or training, and consider matching elbow pads or reinforced tactical pants for full protection. Browse related items to build a complete duty or military surplus kit without rushing the decision.
