Product short description:

The Condor HCB Hydrobag 2.5 LT M.O.L.L.E in Coyote Tan is a compact hydration system for tactical operators, hikers and outdoor users who need on-the-move water access.

- **Capacity:** 2.5?liter hydration bladder included.
- **Attachment:** Integrated M.O.L.L.E. system for mounting to vests and packs; can be used as a slim backpack.
- **Valve:** Hydrolock valve for secure, controlled drinking.
- **Closure & Fit:** Velcro closure with chest strap and removable shoulder straps for stability and comfort.
- **Color & Compatibility:** Coyote Tan finish; compatible with tactical vests and modular gear.

Product description:

Product overview

The Hydrobag 2.5 LT M.O.L.L.E Coyote Condor is a 2.5?liter hydration system designed for military, tactical and outdoor users: operators, security personnel, softgunners, hikers and police on duty. It mounts to M.O.L.L.E. gear or works as a small standalone pack for continuous hydration on patrol, training or long hikes.

Definition: a compact, M.O.L.L.E.-compatible hydration pack with an included 2.5 L polyethylene bladder and Hydrolock valve for controlled drinking.

Main features

Compact, durable and modular — built to integrate with tactical vests and packs while keeping weight and bulk low.

- **2.5 L hydration capacity** with non-toxic polyethylene bladder included
- **Hydrolock valve** for automatic anti-leak closure
- **Insulated, flexible drink tube** and large top opening for easy filling and cleaning
- **M.O.L.L.E. front and side panels** for mounting pouches and accessories
- **Coyote Tan, tear-resistant fabric** with reinforced seams and adjustable compression straps
- **Removable, breathable padded shoulder straps** and adjustable chest strap for stability

How to use / When it’s useful

Use it attached to a plate carrier or tactical vest for hands-free hydration, or wear it as a small back pack with the shoulder straps fitted. Remove the straps to mount directly to M.O.L.L.E. webbing on vests and rucksacks.

Quick answer: Yes — it works both as a standalone pack and as an insert on M.O.L.L.E. gear. In most cases, it is suitable for patrols, training, hiking and other duty or outdoor activities where compact, reliable hydration is needed.

Care and notes

Simple care keeps the Hydrobag functioning and hygienic: rinse the bladder after use, wipe the exterior, and inspect seals before each use.

- Clean bladder through the wide opening; allow to dry fully before storage
- Wipe fabric with a damp cloth; avoid machine washing the pack with the bladder installed
- Check Hydrolock valve and tube connection for secure fit to prevent leaks
- Use potable water only and store in a cool, dry place when not in use

FAQ

Q: Is the water bladder included?

A: Yes, the package includes a 2.5 liter polyethylene bladder. The bladder is ready to use with the pack.

Q: Is it compatible with standard NATO M.O.L.L.E. webbing?

A: Yes. The Hydrobag features M.O.L.L.E. attachment panels front and side for universal mounting on vests and packs that use M.O.L.L.E. webbing.

Q: Can I use it as an independent backpack?

A: Yes. With the padded shoulder straps attached it functions as a small hydration pack. You can also remove the straps to fix the unit to a vest.

Q: How do I clean the bladder and tube?

A: Open the wide bladder mouth for rinsing and drying. Flush the tube with clean water and let both parts air dry before storing to avoid mold.

Q: Is the Coyote Tan color suitable for woodland environments?

A: Coyote Tan is intended to blend well in arid and many vegetated environments; performance will vary with local terrain and foliage.

Q: Are there discounts for military, police or professionals?

A: Many sellers offer reserved conditions for active service members and authorized professionals. Check the store’s policy for eligibility and required documentation.

Tip: Choose the right hydration capacity and mounting option for your mission: verify M.O.L.L.E. compatibility with your vest or pack and browse related tactical and military surplus hydration accessories for tube covers, filters and replacement bladders.
