Product features:

Product short description:

The Condor Outdoor MOLLE Hydration Carrier OE TECH is a compact hydration carrier for outdoor enthusiasts and tactical users who need reliable, hands-free water storage.

- **Material:** Rugged, durable construction built to withstand outdoor use.
- **Capacity:** Optimized to hold a standard hydration bladder, keeping it secure and accessible.
- **Compatibility:** MOLLE-compatible webbing lets you attach pouches and customize your loadout.
- **Use:** Ergonomic design for comfortable wear during hiking, trekking or tactical activities.

Product description:

Product overview

The Condor Outdoor MOLLE Hydration Carrier OE TECH is a 2.5L hydration system for outdoor

enthusiasts, tactical operators, and police/duty users who need hands-free water carry and modular gear integration. It pairs a 2.5?liter hydration bladder with a 600 Denier Cordura outer kit in olive green and an external MOLLE panel for attaching pouches and utilities.

Definition: a compact, MOLLE?compatible hydration carrier designed to integrate with tactical vests and modular loadouts for hiking, training, and duty use.

Main features

Built for durability and modular use, the carrier balances capacity with compact dimensions for easy integration into tactical or outdoor setups.

- **2.5 litre bladder** — ample water for long hikes, training sessions, or patrols.
- **600 Denier Cordura** — durable fabric that offers good resistance to wear and weather.
- **MOLLE exterior** — attach additional pouches and accessories for a modular loadout.
- **Detachable, adjustable straps** — remove or adjust straps to fit vests or other gear.
- **Top Velcro panel** — add morale or ID patches and name tags.
- **Drainage holes** — prevent water from collecting inside the carrier.
- **Three?point buckle strap** — secure, stable fit during movement.

How to use / When it’s useful

Use the carrier as a primary hydration solution when you want hands-free drinking and easy integration with tactical vests, plate carriers, or daypacks. It is suitable for hiking, patrols, range days, cycling, and other outdoor or duty activities where modular attachment points are useful.

Quick answer: fit the carrier directly to your MOLLE panel or wear it standalone with the detachable straps. In most cases, the carrier installs quickly onto a vest or pack and lets you access water without removing other equipment.

Care and notes

Simple care will extend the life of both the bladder and Cordura shell; follow these basic steps after use.

- Rinse and dry the bladder thoroughly before storage to prevent mold or odors.
- Wipe the Cordura exterior clean and let it air dry; avoid prolonged soaking.
- Check seals and the bite valve regularly for wear or leaks.
- Note: drainage holes help remove excess water, but the carrier is not guaranteed fully waterproof in all conditions.

FAQ

Q: What is the hydration bladder capacity?

A: The included bladder holds 2.5 litres of water, suitable for long activities where refills are possible. Carry time will vary by exertion and environment.

Q: Is the carrier compatible with all tactical vests?

A: Yes — the external MOLLE panel allows easy attachment to most MOLLE?style vests and plate carriers for tactical, police, or military surplus setups.

Q: Are the shoulder straps adjustable?

A: The straps are detachable and adjustable to fit different body sizes and to allow mounting to other gear. They can be removed when you mount the carrier directly to a vest.

Q: Is the material waterproof?

A: The 600D Cordura offers good resistance to weather and abrasion. The carrier includes drainage holes to avoid water pooling, but it should not be treated as fully waterproof in heavy rain or immersion.

Q: What are the carrier dimensions?

A: The carrier measures 46 cm x 22 cm, making it compact enough for vests and packs while still holding a 2.5L bladder.

Q: Can I add patches or ID tags?

A: Yes — a Velcro panel on the top of the carrier accepts patches, name tapes, or ID tabs for quick identification and customization.

Tip: Choose the right configuration for your needs—wear with straps for solo use or mount directly to a MOLLE vest for duty operations. Browse related hydration accessories and MOLLE pouches to build a complete, mission-ready setup.
